

Cannon 18-55 lens Sticker set

Overview of sticker positions

Lens setting for placing of small V S sticker (wound all way to 55 stop)

Placing of small V S sticker.

Note the letters orientated the same way up as numbering on lens, and the line indicator next to "S" is positioned in line with manufactures mark at top centre of body/lens joint.

Placing of large sticker. Extend lens fully and mark centre line using straight edge(piece of paper in photo) from manufactures mark on body, then mark with pencil.

Pencil mark on centre line of lens

position the sticker with the 'C' (centre) line on the pencil mark and the front edge of sticker up to filter ring on end of lens (below)

The final sticker to place is the smallest one. With the lens still wound fully out the sticker needs to be placed on the front edge of the Zoom ring with the line on it matching up with the centre line (below).

Please note that a small error can mean the difference between a good shot and a poor shot, we would suggest that prior to fixing the final sticker you mark its position with a pencil and take a test shot with the lens at this setting.

If the picture (doughnut) is out of focus in the area around the centre spot but in focus around the outside of the picture then the focus point is set too far this should be compensated for by moving the pencil line towards the S and V by 1 mm (end of blue arrow above).

If the picture (doughnut) is in focus in the area around the centre spot but out of focus around the outside of the picture then the focus point is set too near this should be compensated for by moving the pencil line away from the S and V by 1 mm (end of red arrow above).
